

WNS Wen New Standard WNS 0.0

This page is an open collection that will be edited. It's a temporary almanac that serves as a foundation for new and interesting technologies affecting our lives, the economy, and innovations that don't yet have a financial impact on our lives, but are promising for reflection and a seed for thought. Perhaps when you read this, this update will carry more weight than a zero-length disclosure.

At the moment, this is just a collection. Edit openly and frankly.
Collect only useful information.

What is WNS standart Wen New Standart

◉ About WEN crypto WNS Standart and Economic ◉ About Wen crypto part 1

As such, we need to make this WEN NFT as accessible as possible to everyone. So instead of having only one owner of this NFT, we have fractionalized this WEN NFT into a trillion little pieces via the Ovols platform.

(Btw, this is fractionalization of a single NFT, not a collection.)

PoW's Finality

Proof of Work (PoW): Finality is achieved when a block is added to the blockchain and sufficiently confirmed by subsequent blocks (e.g., 6 confirmations in Bitcoin). It’s probabilistic, with security increasing as more blocks are mined, but it’s slow (minutes to hours) and energy-intensive due to computational competition.

\$WEN's Finality

\$WEN (on Solana): As a Solana-based memecoin, \$WEN inherits Solana’s Proof of History (PoH) and Proof of Stake (PoS) hybrid consensus. Finality is near-instant (sub-second), with transactions confirmed via validator consensus, ensuring high throughput (65,000+ TPS) and low latency under stress, as proven by Solana’s network tests.

Evaluation Context

PoW Finality: Represents end-stage security through computational work, ensuring immutability but sacrificing speed and energy efficiency.

\$WEN Mechanics: Leverages Solana's fast finality, with community engagement via airdrops (1M+ wallets) and token burns to drive scarcity.

Its design prioritizes speed, scalability, and stability under high transaction loads, as confirmed by Solana's stress tests.

\$WEN's microsystem fosters a growing user base, aiming for global payment potential, with secure, near-instant transactions and no risk of vanishing balances under stress—focusing on technological advancement over mere market trading.

Ultimately, with deliberate dominance and recognition, Wen crypto will give users

Security.

Speed to fault tolerance.

Performance under stressful loads.

Safety of transaction savings.

No risk of balance loss.

Technological progress.

A level above simple market trading.

Scalability of the user base, predicting token scarcity.

WNS shortly

WNS is a lightweight NFT standard based on Token2022, ensuring composability, flexibility, and backward compatibility.

WNS 0.0 launches simply, with a single instruction for NFT creation.

Metadata is built into the Mint account and contains three fields (name, symbol, uri).

New instructions will be added after community approval.

WNS 1.0 is expected to reach general adoption and be renamed.

The main goals of WNS are: asset information coordination, disintermediation, and technology diversity.

WNS addresses important NFT features such as collections, metadata identification, external data, copyright royalties, and royalty compliance.

- WNS strives to minimize on-chain data transfers to reduce costs and ensure decentralization.
 - WNS is based on the Token Extension Program, offering support for key functionality and the DAS API.
- WNS ensures security through Token Extensions auditing and security inheritance.
- WNS standardizes on-chain interactions between assets, asset data viewing, user protection, and asset management.
- WNS is working with the community on version 0.0.1 and is seeking a small-scale project to launch.

Wen New Standard (WNS 0.0) Wen Crypto inform structure

What does the WNS standard include?

Why is it one of the most comprehensive and effective infrastructures for crypto tokens?

WNS 0.0 Standard Description

- WNS – a lightweight NFT standard based on Token2022
 - Launch with a single instruction to create an NFT
 - Metadata contains a name, symbol wen-crypto.com
 - Royalties and Creator Incentives: Automatically distributes sales fees to creators, motivating content production, increasing turnover, and creating sustainable income for the ecosystem.
 - Innovation and Ecosystem Growth: Compatibility with platforms (Jupiter, Phantom, Tensor), cross-platform flexibility, and a focus on decentralization drive the Solana economy’s scalability, attracting investments, partnerships (e.g., collections like “Elements”), and long-term growth in TVL (total value locked).
- Overall, WNS via WEN fosters a fairer, more efficient, and innovative digital economy, democratizing access to assets and strengthening the Solana community.

History 2024 February 10th

AssetDash Spearheads First 10K NFT Collection on WNS Standard, Driving WNS Adoption with Wen Crypto at the Core

AssetDash has achieved a historic milestone by minting the first 10K NFT collection, “Elements,” on the Wen New Standard WNS, a transformative step in advancing the adoption of this revolutionary standard, underpinned by the Wen Coin Foundation’s innovative vision. This landmark collection, launched on

February 10th 2024, underscores the growing significance of Wen crypto and marks a pivotal moment for the WNS standard's integration into the digital asset ecosystem.

Key Goals

- Coordination of asset information
- Elimination of intermediaries
- Diversity in technologies

Key Functionality

- Collections
- Metadata identification
- External data**
- Royalty management
- Security of license fees
- Minimization of data transfers

Decentralization and composability

- Open source and immutability
- Support for protocol and application integration
- Critical functions at the core of L1

Architecture

- Token Extension Program
- Support for key functionality
- DAS API support
- Token Extensions security

Initial Features

- Metadata Index
- Group + Member Indexes
- Mint Closure

Planned Expansions

- Transfer Interceptors
- Non-Transferable Tokens
- CPI Guard + ImmutableOwner

Next Steps Wen crypto with WNS

WEN Coin is a meme coin on the Solana blockchain, based on a fractionalized NFT (the poem “A Love Letter to Wen Bros”), and the first token minted under the Wen New Standard (WNS). WNS is an innovative framework for creating and managing tokenized assets (including NFTs) built on Solana’s native programs using Token Extensions.

Benefits of the WNS Standard for the Economy (in the context of WEN Coin):

– Cost Reduction and Accessibility: Simplifies NFT minting, minimizing fees (rebateable commissions) and reliance on external systems, making asset creation cheaper and faster. This encourages mass participation in the Solana economy, lowering barriers for small creators and users.

– Fractionalization and Liquidity: Enables splitting NFTs into tokens (as with WEN), turning unique assets into accessible shares. This increases liquidity, broadens the investor base, and promotes equitable ownership distribution (airdropped to 1+ million wallets), enhancing decentralization and inclusivity.

The Birth of WNS and Wen Crypto: A Meow-tastic Solana Saga

Connect with us: X: [JupiterExchange](https://JupiterExchange.com) jup.ag/

In the whimsical world of Solana DeFi, January 2024 marked the genesis of the Wen New Standard (WNS), a lightweight, open-source NFT protocol dreamed up by weremeow—the pseudonymous “cat” co-founder of Jupiter Exchange, WNS wen new standart, Wen crypto, Jup. Built atop Solana’s Token2022 extensions, WNS prioritizes ecosystem composability, flexibility, and backward compatibility, empowering community-driven NFT launches with minimal overhead. 4 8 It all kicked off with Meow’s viral poem, a cheeky “wen

moon?" ode to crypto impatience, minted as the inaugural WNS NFT—fractionalized for shared ownership and instant meme magic.

About WNS Wen cat man meme

\$WEN, built on the Solana blockchain, introduces a novel tokenomic structure by tying its value to fractionalized Non-Fungible Tokens (NFTs). Unlike traditional NFTs, which are indivisible and often expensive, fractionalized NFTs split ownership of an asset into smaller, tradeable shares. This allows a broader range of investors to participate in owning high-value digital assets. For \$WEN, this model is community-driven, meaning the token's ecosystem is designed to reward holders and foster collective participation, aligning with the ethos of meme coins while introducing a sophisticated financial mechanism. The model bridges the gap between meme coin culture and cutting-edge DeFi/NFT innovation, attracting both retail and institutional interest.

On the page of Wen we have collected only public, clean information from public networks and publics. Wen cat coin is becoming a strong and confident crypto coin with the most powerful community

Solana \$SOL

Solana Ecosystem Integration: Built on the Solana blockchain, \$WEN benefits from Solana's high-speed, low-cost transactions, enhancing its scalability and appeal for DeFi and NFT use cases.

Jupiter Exchange

Backing from Key Players: \$WEN is supported by prominent Solana ecosystem projects like Jupiter Exchange and Phantom, adding credibility and strategic partnerships.

NFTs \$Wen

Innovative Fractional NFT Model \$Wen crypto As the first community coin based on fractionalized NFTs, \$WEN offers a unique value proposition, attracting investors interested in novel tokenomics

\$WEN's potential

Bullish Market Sentiment: Posts on X consistently highlight \$WEN's potential for significant price growth, with some predicting a market cap reaching billions, reflecting strong investor confidence.

Resilience Over Competitors

\$Wen coin Despite lagging behind other cat-themed coins like \$MEW or \$POPCAT and \$BONK at times, \$WEN is seen as a solid play with strong fundamentals, poised for a breakout.

Team crypto \$WEN

Long-Term Team Alignment The \$WEN crypto team is noted for its long-term commitment and alignment with Jupiter Exchange, fostering trust and stability in project development.

Near event 2026 Catlumpurr Kaula Lumpur Malaysia jan 31 to feb 1 2026 event Co-founder Weremeow

On November 19, 2025, the Solana DeFi ecosystem receives a much-anticipated jolt as Jupiter Exchange hosts its 60th Planetary Call—a recurring community audio/video series that’s become a cornerstone for updates, alpha drops, and unfiltered banter in the “Jupiverse.” This edition stands out not just for its milestone numbering but for the triumphant return of @weremeow, the enigmatic “cat” behind Jupiter’s meteoric rise. Billed as a catch-up on Jupiverse happenings, a deep dive into the vision for Catlumpurr, and teaser thoughts on a mysterious “special thing” slated for 2026, the call (streaming live on YouTube via Luma) promises to reignite the \$JUP token’s momentum amid a choppy market.

Weremeow wow \$Jup and \$Wen

Weremeow (known as **Meow**, Twitter: @weremeow) is the pseudonymous founder of **Jupiter Exchange**, a leading DEX aggregator on Solana, and the creator behind the **\$WEN** meme coin (a community token based on a fractionalized NFT of his poem “A Love Letter to Wen Bros”).

Weremeow and Catlumpurr

He continues leading Jupiter’s evolution into a “DeFi superapp,” hosting events like CatLumpurr and focusing on onboarding the world to decentralized finance.

Weremeow entered crypto several years ago, working on Ethereum projects like Kyber, WBTC, and advising Blockfolio before shifting focus to Solana around 2021.

- He founded Jupiter in October 2021 as a liquidity aggregator to provide the best swap rates on Solana, quickly making it the most popular trading interface in the ecosystem.
- Known for his pseudonymous “cat” persona, he embraces a chaotic neutral style, often communicating philosophically about crypto, community, and money.
- **In early 2024, he created \$WEN as a cultural meme coin, fractionalizing his poem into a trillion tokens and airdropping it to over a million wallets as a test and tribute to “wen” culture.**
- **Weremeow launched Jupiter’s \$JUP governance token in 2024 with one of crypto’s largest airdrops, emphasizing community alignment and decentralization.**
- He has been outspoken about Solana’s advantages for real-world crypto use cases like payments and social transactions.
- Controversies arose around \$JUP’s launch, including token sale mechanics and airdrop farming, which he addressed transparently, admitting some mistakes.
- In 2025, he reflected publicly on errors like overly trying to please the community in DAO decisions and proposed tokenomics changes like supply reductions.
- Weremeow prioritizes product excellence, community consensus, and long-term vision over short-term hype, viewing tokens as representations of project value.

- CatLumpurr is Jupiter Exchange's community-first summit organized by founder Weremeow, set in Kuala Lumpur, Malaysia, from January 30 to February 1, 2026. Unlike traditional conferences, it emphasizes participation through an unconference format where attendees shape sessions, discussions, and feedback on Jupiter's future. Day 1 features major product announcements and updates from the Jupiter team on developments like the DeFi SuperApp and Jupnet. The event includes pre-event social activities such as yoga, games, pickleball, gym sessions, and community hangs to foster connections. It concludes with an after-party, offering networking, collaboration opportunities for builders, \$JUP holders, and Solana enthusiasts, plus travel subsidies for select attendees. CatLumpurr, organized by Weremeow, celebrates Jupiter's community-driven origins, echoing the broad, inclusive airdrop spirit of \$WEN Crypto to over a million wallets. The event highlights Weremeow's experimental approach, similar to how \$WEN tested innovative mechanisms like the WNS standard before major launches. \$WEN embodied "wen" culture and community anticipation, themes that CatLumpurr fosters through participatory unconference sessions on Jupiter's future. As \$WEN fractionalized a poem NFT to democratize ownership, CatLumpurr aims to democratize input on DeFi development for attendees. Reflections on past lessons at CatLumpurr draw from experiences like the \$WEN launch, emphasizing fair distribution and long-term community alignment.

How Jupiter \$JUP came into being and why \$WEN Crypto is its Father by co-founder Weremeow

1. The \$WEN token was created as a precursor experiment to test mechanisms for the upcoming \$JUP launch.
2. \$WEN originated from fractionalizing an NFT of Weremeow's poem using the new Wen New Standard (WNS).
3. WNS is a lightweight NFT standard built on Token-2022 for better composability and lower costs.
4. WNS enables simple NFT creation by locking supply at 1 token with 0 decimals.
5. The poem NFT was minted via WNS and then split into 1 trillion fungible \$WEN tokens.
6. \$WEN served as a proof-of-concept for the WNS fractionalization features.
7. The massive \$WEN airdrop to over 1 million wallets stress-tested Jupiter's LFG Launchpad.
8. This launchpad test ensured smooth infrastructure for the subsequent \$JUP token distribution.
9. \$WEN demonstrated fair, broad community airdrops without favoring whales.
10. Lessons from \$WEN's WNS implementation and launch directly informed \$JUP's community-focused creation.
11. History In the whimsical world of Solana DeFi, January 2024 marked the genesis of the Wen New Standard (WNS), a lightweight, open-source NFT protocol dreamed up by @weremeow—the pseudonymous "cat" co-founder of Jupiter Exchange, WNS wen new standart, Wen crypto, Jup. Built atop Solana's Token2022 extensions, WNS prioritizes ecosystem composability, flexibility, and backward compatibility, empowering community-driven NFT launches with minimal overhead. 4 8 It all kicked off with Meow's viral poem, a cheeky "wen moon?" ode to crypto impatience, minted as the inaugural WNS NFT—fractionalized for shared ownership and instant meme magic.

Concept and first Wen with Jup Jan 24, 2025

WEN is a Solana-based meme coin inspired by the popular “Wen” meme, aiming to be a community-driven token with fractional NFT ownership. It was the first token launched on Jupiter’s LFG launchpad. WEN seeks to bridge the gap between community, art, and technology by representing fractional ownership of a digital art piece (an NFT of a poem). The WEN token was used as a “test” coin by Jupiter before the launch of its native token, JUP, on the Jupiter LFG Launchpad. It served as a stress test for the launchpad and airdrop mechanisms. The WEN airdrop occurred in January 2024, with nearly a million eligible Solana wallets participating. **\$WEN coin is the first cat coin in \$JUP system**

Develop \$Wen coin Who made Wen coin official

The WEN memecoin was developed by **the Jupiter team** as a means to test the community before they airdropped Jupiter’s native token, JUP, to the DEX users. Wen is a Solana-based memecoin that originated from a poem. Each WEN token represents a small piece of the poem “A Love Letter to the Wen Sisters.”

Wen (WEN): A Community Coin Based on a Viral Fractional NFT

In the world of meme coins, it’s common for cryptocurrencies to be inspired by things such as viral tweets or cute cat pictures. Now, a new project takes this concept even further by creating one of the first meme coins based on fractional NFTs. The novel design of the Wen project has attracted a lot of positive attention. In addition to its impressive trade volume, Wen has also managed to boost the popularity of its parent chain, Solana. Will this meme coin be a longtime favorite like Dogecoin — or is it likely to be a flash in the pan? Keep reading to find out.

Key Takeaways: Wen is a Solana-based cryptocurrency built on the idea of fractional NFTs. Each person who holds WEN also has rights to a small portion of a viral poem entitled “A Love Letter to Wen Bros” by @weremeow.

What Does Wen Aim to Achieve?

The Wen project aims to promote positivity in the crypto community. Within the crypto world, it’s popular to make fun of “wen bros” who are constantly asking creators “wen” they’re going to release new digital assets. However, the endearingly profane poem that Wen’s creators chose to turn into a fractional NFT, “A Love Letter to Wen Bros,” expresses appreciation for the excitement and passion of those who are constantly on the lookout for new projects. Having it as the basis for Wen crypto has helped to spread this positive message to countless other people.

Furthermore & Wen

Furthermore, Wen is on a mission to support the Solana blockchain and the Jupiter (JUP) exchange. The coin was designed by Jupiter developers, who are dedicated to “giving back to the Solana community.” They hope that their meme coin will attract attention to Solana and be a helpful way to test the new Jupiter token launch system. By creating an open-source NFT standard, the Wen Foundation hopes to provide fellow Solana developers with a useful new tool. Though the Wen crypto itself is simple, its design showcases all sorts of exciting possibilities for working with NFT projects on Solana.

How Does Wen Work?

Wen’s digital currency is based on the concept of the fractional NFT, a type of NFT that’s been broken into smaller pieces. In order to create Wen, the aforementioned viral poem was first turned into an NFT and then divided into 1 trillion individual pieces. All of these “fractions” were then attached to an individual WEN token. The end result is a system in which each token represents ownership in a small portion of the NFT’s digital assets.

WEN Tokenomics about

To create this new crypto design with fungible tokens representing NFT ownership, the Wen team invented a new token standard for NFTs. The Wen New Standard (WNS) is an open-source creation system for NFT projects that can be accessed by all community members. It was designed on the LFG Launchpad built by Jupiter. This token launch network is backed by the popular Jupiter swap aggregator, and runs on the Solana blockchain.

WEN Tokenomics

Wen has a total supply of 1 trillion tokens. The primary use for this digital currency is trading, but since it also represents ownership of @weremeow’s poem, users can also purchase tokens if they’re interested in holding part of the rights to the poem.

WEN Airdrop

The majority of Wen’s tokens were distributed in a free airdrop that was designed to help promote the LFG Launchpad on the Jupiter exchange. Tokens were available for free to anyone who had used Jupiter in the past six months. People were also eligible for the airdrop if they participated in certain NFT or Solana projects, such as the Saga smartphone. Each user was allowed to claim 645,652 tokens.

This airdrop resulted in record-high numbers of new addresses on Solana. People rushed to sign up for the platform and receive WEN tokens. Over 1 million users participated, and when the airdrop closed on Jan 29, 2024, over 400 billion WEN had been claimed. The remaining 300 billion WEN initially reserved for the airdrop were burned.

Is WEN A Good Investment?

WEN's days of volatile price spikes are most likely gone. The coin's meteoric rise, halted by the news of an underwhelming airdrop, was further overshadowed by Jupiter's launch of its own token a few weeks later. Data analysis from CoinCodex reports that WEN's price will most likely fall by 10% in the next month.

However, even if WEN doesn't seem likely to make anyone a millionaire overnight, it still has some potential. Right now, the coin's price movements are mostly following the shifts of other cryptos, like those of the Ethereum blockchain. This generally leads to small price increases and decreases that certain investors can profit from. As long as you remain cautious and avoid overextending your finances, you may be able to profit from WEN in the future.

Github wen crypto and community

And the very lightweight contract focused on enforcing certain NFT requirements, with all other requirements to be added with community agreement here:.

github.com/wen-community/wen-new-standard

Next Steps For WNS

The next steps for this is to work with the community towards 0.01, and from there we can find a suitable very small scale project to launch that with.

The name definitely does not need to be WEN token standard, it's just a fun way to start. The ecosystem can align on a new name later on, and Jupiter and Ovols will extremely supportive of whatever name is chosen.

I have to emphasise that this is also a deeply personal choice. As a cat, I like things to be as simple and non-binding as possible, and it is my very first NFT, the existing standards did not quite match my needs.

New standards are usually extremely hard to start due to backward compatibility, ecosystem adoption and buyer hesitance, but thankfully we likely don't need any of that for this one off NFT.

Why? Firstly, I don't care about this being seen anywhere and secondly, we are gonna break this NFT into a trillion pieces anyway

4) WEN CRYPTO: The Culture Coin

But of course, WEN is not just limited to the WEN bois. Wen is actually all of us. We are all WEN boi or a WEN girl one way or the other. Even aeyakovenko and bennybitcoins was WENing me all the way last year till Breakpoint, and I WEN my team everyday on the 1000 features, until they often ignore me, much like I unfortunately also often ignore the WEN bois.

Deep down, we are all WEN crypto bois.

wen
